

## Air management and monitoring

**3C** offer an effective management and monitoring service to ensure compliance with current legislation and guidance as detailed in the following:

- Workplace (Health, Safety and Welfare) Regulations and ACOP L24:1992
- HVCA – TR/17. Cleanliness of Ventilation Systems :1998
- CIBSE –TN26:2000. Hygienic maintenance of office ventilation ductwork
- BSRIA Technical note TN 2/2002. Building-related Sickness – causes, effects and ways to avoid it.

## Air quality risk assessment

**3C**'s innovative approach involves an initial assessment of the air supply system to enable an informed decision to be made about the Health & Safety risks associated with each air system on site. This assessment could involve ductwork inspections, deposit thickness testing, environmental monitoring and finally microbial sampling.

Any preventative measure required to minimise health risks are then documented in a comprehensive report.

To ensure routine compliance with latest HSE guidance, a Building Air Quality Action Plan would then be implemented to ensure that a safe and healthy internal environment is maintained.

“Growing public awareness of air quality has put pressure on organisations to improve all aspects of air hygiene management. **3C** offers a full range of air monitoring and maintenance services to address these issues”
