Plant and waste removal services

3C is registered with the Environment Agency as a carrier of licensed waste under the Control of Pollution (Amendment) Act 1989.

Our site operatives are vastly experienced in the use of various cutting techniques employed in the removal of all types of plant for example redundant storage tanks (oil & water), boilers and pipework systems.

We are able to organise collection and disposal of waste oil products to a registered transfer site and the cleaning and gas freeing of oil tanks.

All working procedures are continuously reviewed to ensure compliance with safe working practices.

We are also able to advise on how to deal with other special and hazardous waste products to ensure they are disposed of in a safe manner.

"3C offer responsible management of our customers environmental and waste management needs by providing effective and efficient services backed by over 20 years experience"
