

Pre Treatment Plant

Water softeners

From large industrial units to small domestic units. **3C** can provide a complete turn key package including design, installation, commissioning and maintenance.

Reverse Osmosis Units

Both commercial and undersink domestic units can be supplied and installed.

De Mineralisation and De Alkalisation

A wide range of commercial/industrial plant is available. Refurbishment of existing plant can be undertaken including provision of replacement resin.

Filtration

A comprehensive selection of filtration techniques is available from sand filters and centrifugal separators to the more complicated disk filters, all available with automatic backwash options.

Alternative Technologies

3C is a leading exponent of environmentally friendly water treatment and has experience of and access to a broad spectrum of non chemical systems, for example , ultra violet disinfection units, ozone generation plant, copper and silver ionisation units.

Dosing and Control Equipment

3C offers a range of dosing and control options from straight forward dosing pumps to more sophisticated programmable control systems with local and remote monitoring complete with logging facilities.

Chemical storage facilities including drumless delivery systems

In circumstances where the use of drums and carboys is not viable, **3C** can offer the alternative options of Intermediate Bulk Containers (IBCs) or holding tanks purpose designed to take delivery from tankers or lorry mounted IBCs.

"Increasing regulatory control and legislation has resulted in 3C helping many organisations to introduce and maintain ACOP compliant water hygiene programmes"
